CONTENTS

Special Issue: Selected papers presented at the International Conference on Dynamics of Polymeric Liquids, Capri, Italy, September, 11th–14th, 1991

Editorial ix

A molecular approach to the polydomain structure of LCPs in weak shear flows
G. Marrucci and F. Greco (Naples, Italy) 1

Interrelation between continuous and discrete relaxation time spectra
M. Baumgaertel and H.H. Winter (Amherst, MA, USA) 15

The break up of fluids in an extensional flow field
J. Ferguson, N.E. Hudson (Glasgow, UK) and B.C.H. Warren (Porton Down, Salisbury, UK) 37

Pressure drop scaling laws and structural stress contributions for complex flows of flexible polymer solutions in thick solvents
U. Cartalos and J.M. Piau (Grenoble, France) 55

Transient elongational flow behaviour of thermotropic liquid crystalline polymers
T.S. Wilson (Blacksburg, VA, USA) and D.G. Baird (Bristol, UK) 85

A simple empirical model describing the steady-state shear and extensional viscosities of polymer melts
H.A. Barnes and G.P. Roberts (Port Sunlight, UK) 113

Understanding cusped interfaces
D.D. Joseph (Minneapolis, MN, USA) 127

On steady streaming in viscoelastic liquids
G. Böhme (Hamburg, Germany) 149

Numerical prediction of extrudate swell of a high density polyethylene
A. Goublomme, B. Draily and M.J. Crochet (Louvain-la-Neuve, Belgium) 171

Spectral calculations of viscoelastic flows: evaluation of the Giesekus constitutive equation in model flow problems
A.N. Beris, M. Avgousti and A. Souvaliotis (Newark, DE, USA) 197

Birefringent pipes: the steady flow of a dilute polymer solution near a stagnation point
O.G. Harlen, E.J. Hinch and J.M. Rallison (Cambridge, UK) 229

On viscoelastic flows through abrupt contractions
D.V. Boger (Melbourne, Vic., Australia), M.J. Crochet (Louvain-la-Neuve, Belgium) and R.A. Keiller (Cambridge, UK) 267

On the simulation of viscoelastic flow past a sphere using spectral methods
B. Gervang, A.R. Davies and T.N. Phillips (Aberystwyth, UK) 281
